## Liquid-proof company flooring

*The solution for your (company) floor*

The liquid-proof non-skid floor consists of high-quality recycling plastic. The liquid-proof floor is resistant to oil, lye, acids and other chemicals. Ideal for companies, but also for private areas such as garage and storage space. The floor has a thickness of 1 cm and is applied with water-resistant two-component adhesive on the existing underlay. By thermally and chemically welding the seams a 100% liquid-proof floor finish is created.

The tile has a size of 49 x 49 cm. The tiles are available in the colors black, Anthracite and gray. By choosing a specific color of a seam, the floor can be adapted to the interior and surprising combinations are possible.

The welding seams are available in various colors, including red, blue, yellow, green, gray, anthracite and black.

The liquid-proof flooring can be used for all kinds of applications, such as:

- |                    |                 |                     |
|--------------------|-----------------|---------------------|
| • kitchen          | • dance floor   | • beer cellar       |
| • washing kitchen  | • cold room     | • butchery          |
| • bar              | • freezing cell | • bakery            |
| • refreshment room | • gym/fitness   | • beverage industry |
| • sauna            | • warehouse     | • food industry     |

## All advantages:

- Strong
- Sustainable
- Liquid-proof
- Non-skid, even when the floor is wet
- Sound absorbing
